

In the Claims

1. (Currently Amended) A container comprising:

a container body defining a receptacle portion receiving therein a content and opening at an upper edge thereof, and a lid body engaged with said opening upper edge of said container in a condition closing said opening upper edge of said container, and

a toy member attached to at least one of said container body and said lid body.

2. (Currently Amended) The container as set forth in claim 1, wherein ~~a hole is formed in~~ said container body having a hole formed therein, and said toy member is secured on a connecting member extending from said hole.

3. (Currently Amended) The container as set forth in claim 2, ~~wherein two holes are formed in~~ said container body having two holes formed therein, said connecting member extends from one of said two holes to the other of said two holes across said receptacle portion, and two toy members are secured on respective ends of said connecting member extending from respective of two holes.

4. (Currently Amended) The container as set forth in claim 2 ~~or 3~~, wherein said hole is provided at a position above said receptacle portion and above said content received in said receptacle portion.

5. (Original) The container as set forth in claim 1, wherein said toy member is a sliding member slidably provided on an outer surface of at least one of said container body and said lid body.

6. (Original) The container as set forth in claim 5, wherein a pair of rail portions are provided on said outer surface in parallel relationship with each other, and said sliding member is located between a pair of said rail portions and slidably mounted along said rail portions.

7. (Original) The container as set forth in claim 6, wherein said outer surface is drawn pictures, and said sliding member is movable in front of said pictures.

8. (Original) The container as set forth in claim 1, wherein said toy member is a handle member mounted on said container body.

9. (Original) The container as set forth in claim 8, wherein both ends of said handle member are pivotably connected to said container body.

10. (Currently Amended) The container as set forth in claim 8 ~~or 9~~, wherein a dispensing opening for ~~taking out~~ removing said content is formed in an upper surface of said lid body, a small lid flap is provided on the upper surface of said lid body for opening and closing said dispensing opening, and said handle member is positioned ~~not interfering~~ so as to not interfere with said small lid flap in open position, when said handle member is pivoted to a position above said lid body.

11. (Currently Amended) The container as set forth in ~~any one of claims 1 to 3, 5 to 9~~ claim 1, wherein said content is a tissue paper.

12. (New) The container as set forth in claim 3, wherein said hole is provided at a position above said receptacle portion and above said content received in said receptacle portion.

13. (New) The container as set forth in claim 9, wherein a dispensing opening for removing said content is formed in an upper surface of said lid body, a small lid flap is provided on the upper surface of said lid body for opening and closing said dispensing opening, and said handle member is positioned so as to not interfere with said small lid flap in open position, when said handle member is pivoted to a position above said lid body.

14. (New) The container as set forth in 2, wherein said content is tissue paper.

15. (New) The container as set forth in claim 3, wherein said content is tissue paper.

16. (New) The container as set forth in claim 5, wherein said content is tissue paper.

17. (New) The container as set forth in claim 6, wherein said content is tissue paper.

18. (New) The container as set forth in claim 7, wherein said content is tissue paper.

19. (New) The container as set forth in claim 8, wherein said content is tissue paper.

20. (New) The container as set forth in claim 9, wherein said content is tissue paper.
